BIOTECHNOLOGY & BIOENGINEERING

INDEX TO VOLUMES 41 and 42

ISSUE 1–11 VOLUME 41

ISSUE 1–11 VOLUME 42

Jan. 1993–Dec. 1993

BIOTECHNOLOGY & BIOENGINEERING

Editor
Eleftherios T. Papoutsakis
Northwestern University, Evanston, Illinois

Associate Editors
Douglas S. Clark, *University of California Berkeley, California*
Frank DiCosmo, *University of Toronto Toronto, Canada*
George Georgiou, *University of Texas Austin, Texas*
Maria-Regina Kula, *Heinrich-Heine Universität Düsseldorf in der KFA Julich, Germany*
Daniel I. C. Wang, *Massachusetts Institute of Technology, Cambridge, Massachusetts*

Founding Editor
Elmer L. Gaden, Jr., *University of Virginia, Charlottesville, Virginia*

Editorial Board
James E. Bailey
Harvey W. Blanch
Arnold L. Demain
C. P. Leslie Grady, Jr.
Jeffrey A. Hubbell
Isao Karube
Malcolm D. Lilly
Michael L. Shuler
Daniel Thomas

Scope: The editors of *B&B* will consider for publication original articles, reviews, and mini reviews that deal with all aspects of applied biotechnology. These include:

- applied aspects of cellular physiology, metabolism, and energetics of bacteria, fungi, animal, and plant cells;
- enzyme systems and their applications, including enzyme reactors, purification, and applied aspects of protein engineering;
- animal-cell biotechnology, including media development, modeling, tissue engineering, and applied aspects of cell interactions with their environment and other cells;
- bioseparations and other downstream processes including cell disruption, chromatography, affinity purifications, extractions, and membrane processing;
- environmental biotechnology, including aerobic and anaerobic processes, systems involving biofilms, algal systems, detoxification and bioremediation, and genetic aspects;
- applied genetics and metabolic engineering, including modeling molecular processes of applied interest;
- plant-cell biotechnology;
- biochemical engineering, including transport phenomena in bioreactors, bioreactor design, kinetics and modeling of biological systems, instrumentation and control, biological containment, and bioprocess design;
- biosensors;
- spectroscopic and other instrumental techniques for biotechnological applications, including NMR and flow cytometry;
- thermodynamic aspects of cellular systems and their applications;
- mineral biotechnology, including coal biotechnology;
- biological aspects of biomass and renewable resources engineering; and
- fundamental aspects of food biotechnology.

The editors will consider papers for publications based on novelty, their immediate or future impact on biotechnological processes, and their contribution to the advancement of biotechnology and biochemical engineering science. Submission of papers dealing with routine aspects of bioprocessing, description of established equipment, and routine applications of established methodologies (e.g., control strategies, modeling, experimental methods) are discouraged. Theoretical papers will be judged based on the novelty of the approach and their potential impact, or on their novel capability to predict and elucidate experimental observations.

Biotechnology and Bioengineering (ISSN:0006-3592) is published 22 times per year, semi-monthly, except May, July, September, and November, when it is published monthly, and in March and April when it is published 3 times, on the 5th, 15th, and 25th, by John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158.

Copyright © 1993 John Wiley & Sons, Inc. All rights reserved. No part of this publication may be reproduced in any form or by any means, except as permitted under section 107 or 108 of the 1976 United States Copyright Act, without either the prior written permission of the publisher, or authorization through the Copyright Clearance Center, 27 Congress Street, Salem, MA 01970, (508) 744-3350, fax (508) 745-9379. Second-class postage paid at New York, NY, and at additional mailing offices.

The code and copyright notice appearing at the bottom of the first page of an item in the journal indicates the copyright holder's consent that copies may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the United States Copyright Law. The percopy fee for each item is to be paid through the Copyright Clearance Center. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Such permission requests and other permission inquiries should be addressed to the Permissions Dept.

Subscription price (Volumes 41–42, 1993): $1,190.00 in US, $1,410.00 in Canada and Mexico, $1,492.50 outside North America. All subscriptions outside US will be sent by air. Personal rate: $290.00. Payment must be made in US dollars drawn on a US bank. Claims for undelivered copies will be accepted only after the following issue has been received. Please enclose a copy of the mailing label. Missing copies will be supplied when losses have been sustained in transit and where reserve stock permits. Please allow four weeks for processing a change of address. For subscription inquiries, please call (212) 850-6645.

Postmaster: Send address changes to *Biotechnology and Bioengineering*, Susan Malawski, Director, Subscription Fulfillment and Distribution, John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158.

Advertising Sales: Inquiries concerning advertising should be forwarded to Roberta Frederick, Advertising Sales, John Wiley & Sons, 605 Third Ave., New York, NY 10158; (212) 850-8832. Advertising Sales, European Contact: Michael Levermore, Advertising Manager, John Wiley & Sons, Ltd., Baffins Lane, Chichester, Sussex PO19 1UD, England.

Manuscripts should be submitted to the *B&B* Editor, Professor Eleftherios T. Papoutsakis, Dept. of Chemical Engineering, Northwestern University, 2145 Sheridan Rd., Evanston, IL 60208-3120, USA.

All Other Correspondence: Address to *Biotechnology & Bioengineering*, Publisher, Interscience Division, Professional Reference, and Trade Group, John Wiley & Sons, Inc., 605 Third Ave., New York, NY 10158.

Information for contributors appears in the first and last issue of each volume. The contents of this journal are indexed or abstracted in Biological Abstracts, BIOSIS, Chemical Abstracts, Chemical Titles, Current Contents/Life Sciences, Current Contents/Agriculture, Biology, and Environmental Sciences, Excerpta Medica, Research Alert (ISI), Science Citation Index (ISI), and SCISEARCH Database (ISI).

Editorial Production, John Wiley
Hattie Heavner and Don Simmons, Jr.

This journal is printed on acid-free paper.

Biotechnology and Bioengineering

Subject Index to Volumes 41 and 42

Please note that A refers to Volume 41 and B refers to Volume 42

α-amylase, 1142B
α-amylase production, 854A
Acclimation, 79A
Acetaldehyde, 24B, 667B
Acetate production, 843B
Acetic acid, 43A, 316A, 347A
Acetoin, 791A
Acidogenesis kinetics, 479A
Acidogenic biofilm, 736A
Acid phosphatase, 836B
Activated sludge process, 315B
Activity-temperature profile, 1245B
Adaptation, 440B
Additive, 171A
Adhesion, 167B
Adsorption, 280A, 401B, 469B, 503B, 899B
Adsorption-disorption, 1238B
Adsorptive immobilization, 833A
Aerobic and anaerobic metabolism, 215B
Aerosol OT, 596B
Affinity chromatography, 401B, 1331B
Affinity partitioning, 1199B, 1209B
Affinity precipitation, 405A, 991A
Affinity thermoprecipitation, 1101A
Aggregate effects, 520B
Aggregates, 179A
Aggregation, 1061B
Agrobacterium rhizogenes, 581A
Air-lift loop reactor, 429A
Airlift tower loop reactor, 205B
Air slugs, 525A
Ajmalicine production, 253A
Albumin, 1039A
Alcohol dehydrogenase, 367B
Alcoholic fermentation, 1352B
Alcohol oxidase, 667B
Algal biosorbent, 819A
Alginate, 381B
Alkaline protease, 43A
Alkaloid production, 503A, 494B
Amberlite LA-2, 527B
Amidase activity, 309B
Amino acid addition, 556A
Amino acids, 59B, 697B
9-aminoacridine, 118A, 295B
Ammonia inhibition, 159B
Amygdalin, 465A
Anaerobic and aerobic, 509B
Anaerobic biofilm, 1360B
Anaerobic digestion, 700A, 159B
Anaerobic reactor, 347A
Analytical effectiveness factor, 267B
Anchorage-dependent, 635B
Anchorage-dependent cells, 380A
Anchorage-independent cells, 1218B
Anchusa officinalis, 884B
Anhydrous media, 566A
Animal cell bioreactor, 179A
Animal cell culture, 1287B
Animal cells, 724B
Anomeric specificity, 440B
Anoxia, 339B
Antibiotics yield, 1068B
Antibody productivity, 185B, 247B, 601B, 1322B
Aphrons, 72A
Apricot seed extract, 465A
Aqueous two phase, 72A
Arginine limitation, 1142B
Artificial liver, 194A, 579B
Artificial seed, 449B
Ascophyllum nodosum, 819A
Aspergillus nidulans, recombinant, 273A
Aspergillus niger, 1007A
ATP, 873B, 1337B
Attached film, 859B
Autoselection, 801A, 95B
Avidin, 991A

β-galactopyranoside, 657B
β-galactosidase, 211A, 333B, 657B, 1113B, 1245B
β-galactosidase assay, 708B
β-glucosidase, 405A, 846A, 1019B
β-lactamase, 937A, 557B
Bacillus firmus, 43A
Bacillus stearothermophilus, 125B
Bacillus subtilis, 791A, 686B, 1142B
Bacillus thuringiensis, 1107B
Back-extraction, 488A
Bacteria, 1277B
Bacterial adhesion, 671A
Bacterial contamination, 421B
Bacterial cytochrome P-450$_{cam}$, 411A
Bacterial leaching, 459A
Bacterial reduction, 129A
Bacterial suspensions, 525A
Baculovirus, 104A
Baculoviruses, 1293B
Baculovirus expression, 240B
Baker's yeasts, 617A, 826A
Batch culture, 974B
Batch growth, 376B
Benzene, 1057A
Betula pendula Roth, 35A
Bilirubin oxidase, 887A, 894A
Binding, 1019B
Biocatalyst, 465A, 267B
Biochemical oxygen demand sensor, 1107A
Bioconversion, 263A, 398B
Bioconversions, 1048A
Biodegradable polymers, 716B
Biodegradation, 79A, 512A, 625A, 693A, 643B, 859B
Biodegradation chloronitrobenzene, 927A
Biodegradation of phenol, 915A
Biodegradation priority pollutants, 927A
Bioenergetic growth yield, 1003A
Bioenergetics, 873B
Biofilm, 111A, 211A, 479A, 728A, 111B
Biofilm detachment, 728A
Biofilm diffusion reaction, 915A
Biofilm void fraction, 736A
Biofilter, 693A
Biofilter modeling, 512A
Biofiltration, 512A
Biological acid transformation, 303A
Biological solvent production, 1053B
Bioluminescence, 945B, 1190B, 1337B
Biomass, 785B
Biomass estimator, 1311B
Biomass output, 1003A
Biomass productivity, 891B
Biomass yield, 1124B
Biomedical reactor, 1252B
Bio-oxidation, 1164B
Biopolymer hydrolysis, 1082A
Biopolymers, 755A
Bioprocess monitoring, 387B, 1190B
Bioreactor, 25A, 118A, 194A, 357B, 724B
Bioreactor cultivation, 542B
Bioreactor model, 74B
Bioreactor, packed bed, 25A
Bioreactors, 295B, 909B
Bioremediation, 625A
Biosensor, 658A, 251B, 387B
Biosensors, 964A, 1037B
Biosorbent, 826A, 785B
Biosorption, 826A, 785B
Biosurfactant, 1175B
Biosynthesis, 59B
Biotin, 991A
Biotransformations, 1048A, 1057A
Biphasic systems, 603A
Bombyx mori, 245A
Bovine liver catalase, 231A
Bovine serum albumin, 280A
Brewer's yeasts, 826A
Broad host range expression plasmids, 837A
Bubble-column reactor, 494B
Bubble oxygenation, 685A
Butanediol, 791A
2,3-butanediol, 1263B
2,3-butanediol fermentation, 1270B
Butyrate, 601B

Cadmium biosorption, 819A, 826A
Calcium, 833A
Calcium alginate beads, 755A
Calcium alginate reactor, 43B
Caldocellum saccharolyticum, 1019B
Candida cylindracea lipase (CCL), 196B
Candida guilliermondii, 1301B
Cane bagasse, 1007A
Carbon and nitrogen feeding, 793B
Carbon dioxide inhibition, 459A
Carbon dioxide uptake, 459A
Carbon electrode, 535B
Carbon/nitrogen/phosphorus limitation, 43A
Carbon-to-nitrogen ratio, 1075A
Carboxylic and amino acids, 287A
Catalase, 474A
Catalysis, 772B
